

## Frequently asked questions

# Jointing

### Q. Can I use fibre tape for jointing?

The Artex system for jointing incorporates Artex Joint Tape (brown or white paper). This system provides maximum crack resistance. Other methods will not give the same degree of strength.

### Q. I have a large crack in two rooms of my new bungalow.

The ceilings in a bungalow are typically fixed before the room partitions are constructed. The effect is that the building has only one large ceiling throughout with the weight of the roof bearing upon it. Movements in the structure for a variety of reasons may show as cracks along joints affecting sometimes several rooms at a time. The problem is compounded when the cut ends of boards are not staggered.
