

Gyproc Cornice 135

Mitre templates

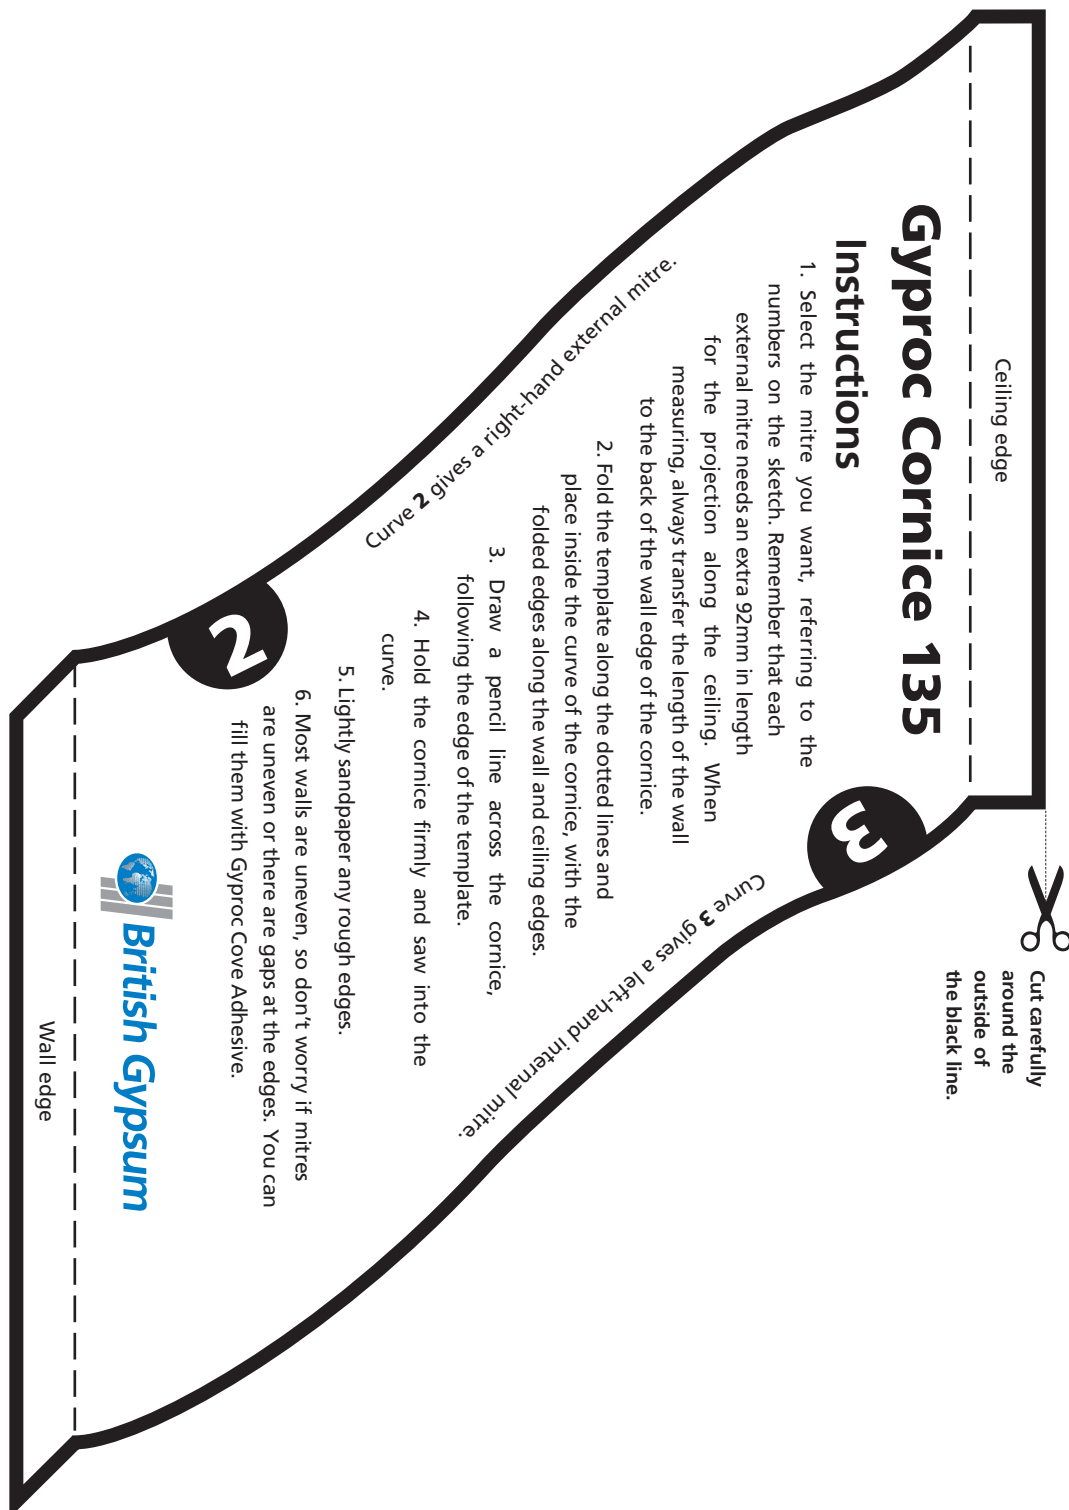

These templates are designed to help you create mitred corners for Gyproc Cornice 135. You will need both templates to cut internal and external angles and all the instructions are contained within them. To use, cut carefully around the outside edge of each template.

Printing tips

To ensure the templates you print are correctly sized, you will need to set your print parameters to 'full size' not 'fit-to-page'.

Training

If you would like to learn more about installing cove and cornice, you can attend a one-day course at British Gypsum's Drywall Academy training centres. Further details can be found at www.british-gypsum.com

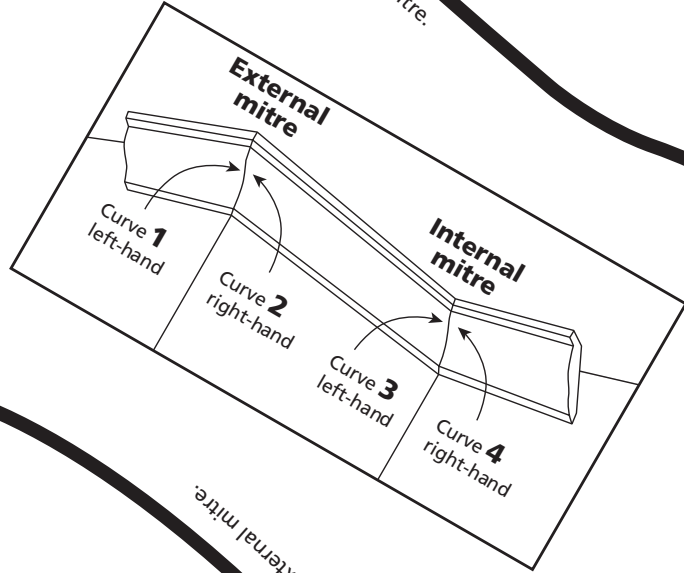

Gyproc Cornice 135

Ceiling edge

1

Curve 1 gives a left-hand external mitre.

4

Curve 4 gives a right-hand internal mitre.
